

The airwaves are a natural resource, and by allowing BPL, the FCC will effectively permit pollution of the airwaves. It will destroy hF communications which is a home for many government and private party pursuits.

Does not the FCC wonder why other countries have stopped BPL ? It was for interference reasons!

My hope is that the FCC reconsider this madness. Why is it so important that some joker be able to download porn in the boondocks at break-neck speed. It is wrong and it is a terrible shame.
